About Us

Dongguan Yangzheng Technology Co., Ltd. was established in September 2012 and is located in Songshan Lake High-tech Zone, Dalang Town, Dongguan City, Guangdong Province—a core hub of China's manufacturing industry. Dongguan contributes over 60% of the national manufacturing output among major cities, and Songshan Lake is home to numerous leading enterprises. The location boasts convenient transportation, just 1 hour from Hong Kong and 2 hours from Macau by car.

Our facility spans 50,000 square meters, staffed by 30 skilled employees. We operate 30 high-precision CNC machining centers (including 3-axis, 4-axis, and 5-axis machines), and 20 CNC Swiss Lathes, serving over 100 long-term domestic clients. We offer $\pm 0.001\text{mm}$ tolerance, 24-hour quoting, and 7-day lead times. Our 5,000m² facility is supported by a skilled team and advanced QC tools including ZEISS CMM.

We serve a wide range of industries such as automation, medical, aerospace, electronics, and robotics, ect. No MOQ, fast response, and custom machining solutions for global clients.

Yang Zheng Culture

Our vision

Become the Chinese supplier that the world needs and provide the world with the highest quality customized products.

Our mission

To become the most trusted partner for our customers by delivering outstanding service and reliable solutions.

Core Principle

Collaborate with people to build a better future for all.

Engineering-Design for Manufacturability

DFM

Early part reviews provide critical insights for successful product development. By getting involved early in part and mold design, we conduct thorough Design for Manufacturability (DFM) reviews to identify and resolve potential issues before production begins.

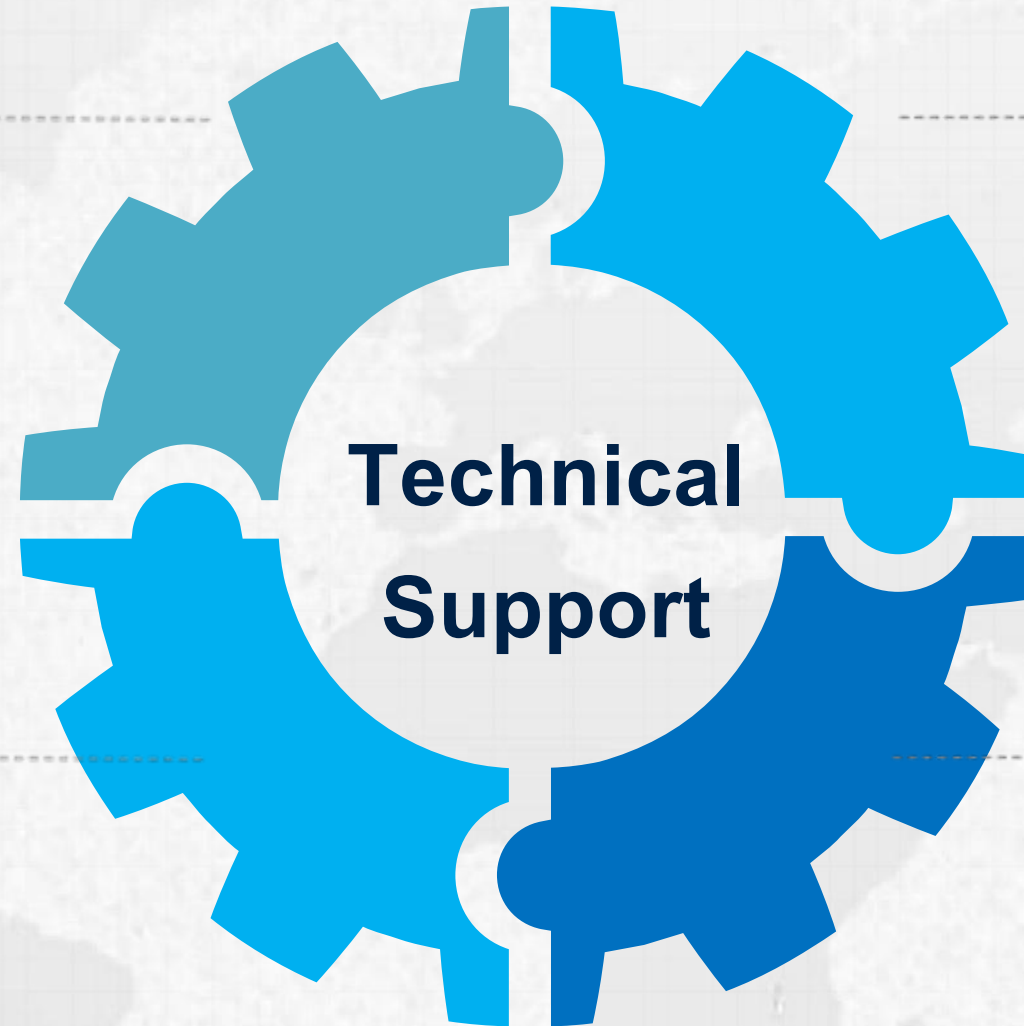

This proactive approach ensures a smoother manufacturing process, reduces costs, and shortens lead times. The benefit of DFM to our customers is clear: improved efficiency, higher quality, and enhanced profitability throughout the production cycle.

Engineering-Technical Support

Our engineering team verifies and analyzes the manufacturing process based on the customer's drawings to ensure precision and feasibility before production.

During the production process, our company will conduct inspections on the first piece to ensure that there will be no problems during the production process

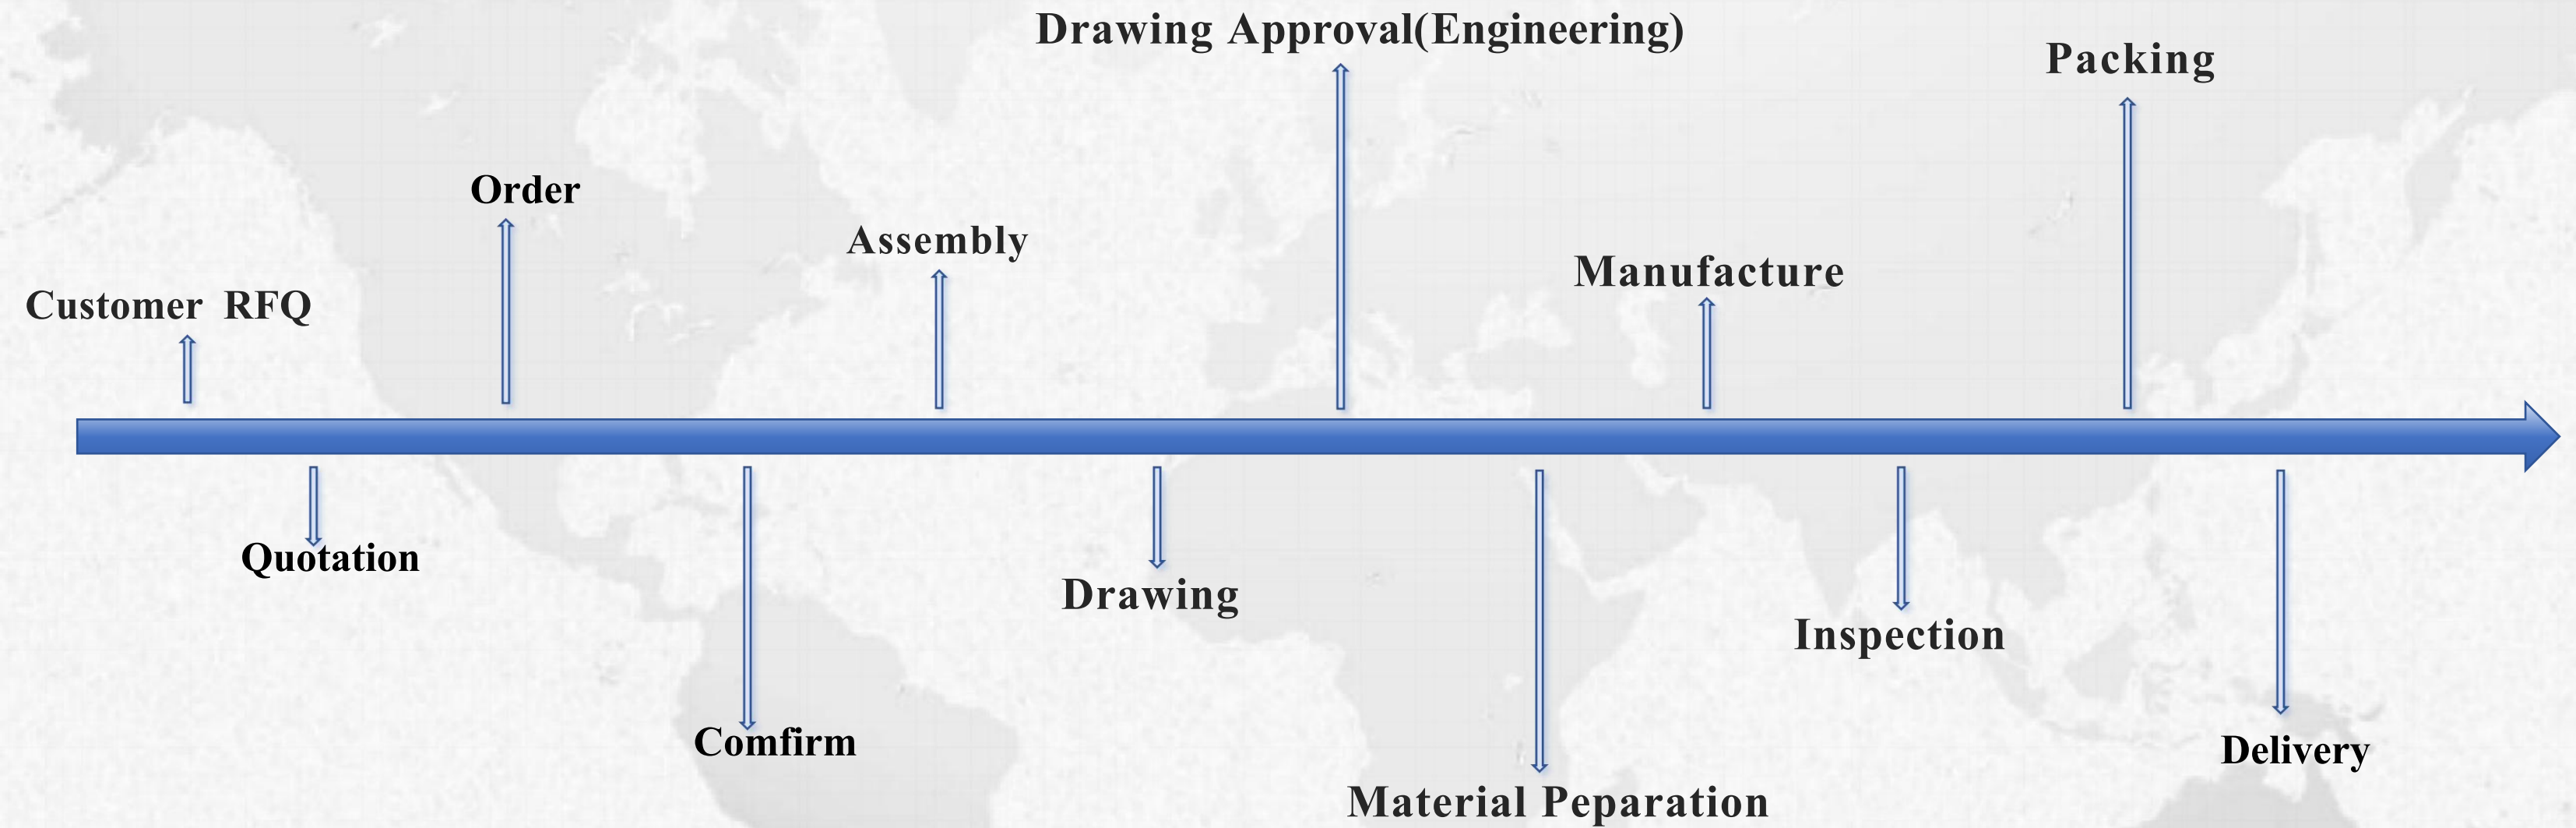

We strictly select our raw material suppliers based on their certifications and compliance with industry standards. All incoming materials are carefully inspected and tested to ensure they meet the required quality and specifications before production.

Before shipment, our quality team conducts a comprehensive inspection of each part according to the 2D drawings and specifications to ensure no quality issues upon arrival at the customer's site.

Project Flow

Manufacturing

RAPID PROTOTYPING

01

Yangzheng Technology introduces the world's most advanced prototype machines. After designing, it can produce accurate samples and ensure the accuracy of data before opening the mold, greatly shortening the development cycle and save much cost.

SHEET STAMPING

02

We provide two manufacturing processes for sheet metal products. For small batch production, we use laser cutting and bending stamping processes, and for large batch production and complex precision products, we use sheet metal stamping molds and stamping processes. Our rich experience and precision machines encourage us to provide our clients with shorter lead times, higher quality and high-precision products.

CNC MACHINING

03

Yangzheng Technology has hundreds of machines and lathes, and our unparalleled in-house capacity ensures your parts are shipped on-time, every single time. Our CNC machining services is designed for rapid prototyping and low-volume production of end-use parts.

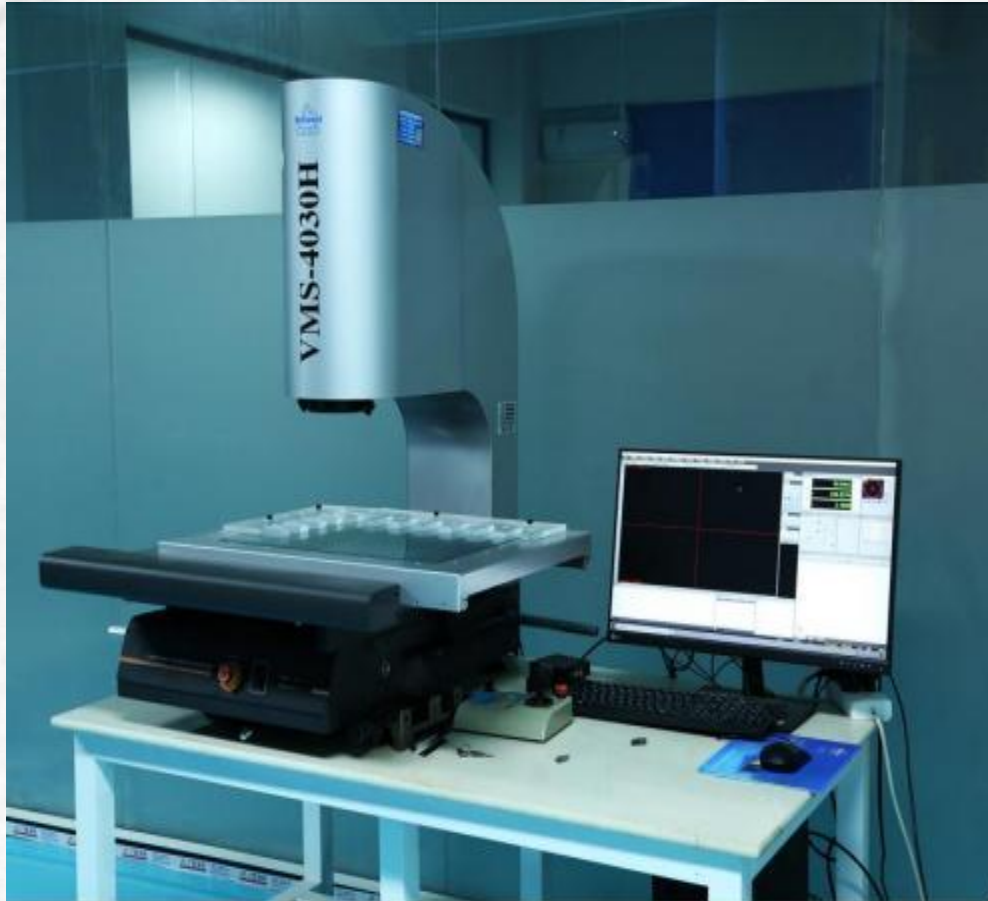

RAPID PROTOTYPING

04

Our strong engineering mold team can help reduce production. In terms of work technology, our injection model designs, die casting services are designed for both low-volume and mass production of end-use parts, high-volume production tooling production, mass customization product lines.

Quality Control

We are equipped with advanced high-precision inspection equipment, including ZEISS CMM (three-coordinate measuring machine), and a variety of professional metrology tools. Our experienced QC team conducts rigorous inspections for every part according to the 2D drawing specifications.
